

TYPES OF METER INSTALLATION

Please select the type of meter installation you require from the photographs below

(A) SURFACE MOUNTED METER BOX

This is installed by our teams when we arrive on site. The box cannot be positioned above or within 150mm of the edge of drains, inspection covers, manholes, air bricks, etc. *Height: 497mm, Width: 442mm, Depth: 230mm.*

(B) ABOVE GROUND ENTRY

The meter can be sited internally, either on the front facing wall or side wall.

(C) UNIBOX

The unibox is partially buried at the foot of the house wall, protruding approximately 500mm above ground level. This installation may not be suitable for all types of property. *Height: 500mm, Width: 480mm, Depth: 290mm.*

**(D) BUILT-IN METER BOX
(Builder/Developer Only)**

This box is designed to be installed either in the external wall of a property under construction or in a hole cut in the wall of an existing property. The fitting of the built-in box, including any work, is the responsibility of the owner. It must be installed prior to the installation of the external supply pipe. It is essential that the box is tightly fitting and not damaged in any way ie. Cracked or punctured.

Height: 600mm, Width: 410mm, Depth: 60mm.

Recess size: Height: 532mm, Width: 366mm, Depth: 160mm.
