

Project Title	Description	Planned Launch Date	Kick-Off Date	Duration (Months)
FARM (Future Asset Resilience Mapping)	GIS based project designed to assess environmental risks, infrastructure vulnerabilities, climate resilience and adaptation opportunities across the network. The project will involve gathering geospatial, physical and environmental datasets and overlay these datasets with different climate scenarios to see impact of climate change across our network to generate a risk heat map of our network and complete an asset vulnerability assessment.	Sep-26	Jan-27	12
HyLine Gogledd FEED Ready	Phase 2.1 (FEED Ready) aims to advance the project in preparation for the delivery of Phase 2.2 within the current context of policy and regulatory developments to account for the remaining circa. £13m DEVEX gap. Funding discussions in progress with Flintshire and Wrexham Investment Zone	Sep-26	Feb-27	11
Safe Settlement	As part of the recent Lessons Learnt phase 2 briefing to OFGEM a question was asked "If large diameter mains are decommissioned, is there evidence of subsidence / sinkholes as a result of their inactivity". This project will identify large diameter mains that have been decommissioned to evaluate the impact this has had on the immediate surrounding area. Mains can be categorised based on diameters / material / age / soil type to demonstrate if issues have arisen.	Oct-26	Feb-27	6
Decarbonised Digging Demonstrator	Explore alternative technologies for alternative fuels to run the Vaccum Excavators owned and operated by WWU and their 3rd party contractors. Vac Ex is a huge contributor to emissions.	Oct-26	Feb-27	7
Industrial Decarbonisation Pathways	Refresher of 2022 Regional Decarbonisation Pathways using evidence generated in GD2, accounting for updated policy and new technology. Work will provide deliverables for NESO CSNP, and a plan for updating work built into future business plans as a BAU activity.	Nov-26	Mar-27	6
